

OUR PROVEN PROCESS

THAT KEEPS PEOPLE WORKING

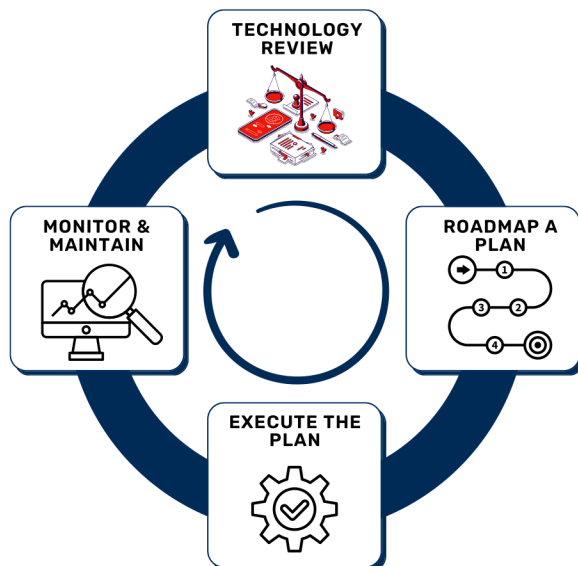

TOTALCARE IT HAS BEEN MAKING BUSINESS IT AND SECURITY EASY SINCE 2007

HOW WE DO IT:

- We help CEOs understand their risk tolerance, compliance needs, and liability in incident prevention/response/recovery.
- We guide your leadership team through alignment to data security standards.
- If you have internal IT resources (CIO, Director of IT, etc.), we support and enhance this function with added expertise, bandwidth, and cybersecurity.
- We support your employees with technical services (IT helpdesk) and cyber hygiene.

OUR TECHNOLOGY REVIEW MODEL

- Regular Technology Reviews are conducted on your environment. Meetings are then scheduled with your leadership team to discuss the findings.
- Together we create a 6-12 month roadmap for technology improvements and budgeting.
- This includes reviewing any data compliance requirements and planning future projects.

"I have complete peace of mind regarding IT with TotalCare managing our clinic's infrastructure and security. Their team operates as an extension of our employees with thorough communication and accountability.

IT support is not the kind of thing that you want to gamble with by choosing a "value-priced" or un reputable service. Over the time that I have worked with TotalCare IT, I have been approached by other companies that all claimed to be "just as good" but at a lower cost. When I look at the resources and expertise being offered, it's easy to see that it would be a mistake to change."

David Mecham, Madison Women's Clinic
